

Migrate to SAP S/4HANA the way you want to

Get insights into your migration options and accelerate your Selective Data Transition with PRISM for S/4HANA®, a flexible approach to create a lean, secure SAP estate.

Customise your SAP S/4HANA migration solution

Determine best options with free automated assessment

Minimise business disruption and de-risk migration process

Choose data to reside, adapt or sunset, and reduce footprint

Anonymise data and comply with data privacy laws

The move to SAP S/4HANA is unlike any other migration project you have done before. Not only is it a technical upgrade, but it is also a functional change, and a new licensing conversation with SAP. You may also wish to consider your migration options: typical approaches of a greenfield or brownfield migration might be too limiting for your needs, or you may wish to restructure your landscape during the migration.

PRISM: a Selective Data Transition (SDT) solution to modernise your SAP system

PRISM is the solution for high-speed, low-risk transformations to modern SAP® landscapes, including on-premise SAP R/3 to SAP S/4HANA®, SAP® SuccessFactors® Employee Central Payroll or SAP® BW/4HANA®. It's a flexible, cost-effective solution to allow the adoption of the latest SAP technologies, and works with RISE with SAP.

If you are considering a Selective Data Transition (SDT), PRISM for S/4HANA provides a turnkey selective data migration service. Using a software-driven migration approach – leveraging the Data Sync Manager™ (DSM) suite for Landscape Transformation (LT) – means that the project can include some greenfield and brownfield elements. This enables you to assess more flexible data migration options, and to manage risks and avoid costs associated with a traditional S/4HANA conversion.

Why choose SDT and PRISM for S/4HANA?

- Keep the parts of your on-premise system that work well, and discard the parts that are not supportive of your new goals.
- Customise your SAP S/4HANA migration solution without re-building the entire system, while retaining options for historical data migration.
- Change your landscapes (for example, split or consolidate existing systems) as part of your move to S/4HANA.
- De-risk the migration process by minimising business disruption when moving to SAP S/4HANA and related applications.
- Take relevant historical data only, and retain a consistent process chain/document flows. Leave obsolete data behind.

- Reduce and optimise technical downtime during go-live with proven software and methodologies.
- Introduce new business processes and harmonise historical data during your journey to S/4HANA, while protecting good practices and previous investments like custom applications.
- Get data minimisation and anonymisation as additional business value-adds, so your platform spend is reduced and you can focus on business process innovation.

Accelerate your SDT with PRISM for S/4HANA

Get insights: free pre-project assessment

Identify and mitigate project risks early. Our free automated PRISM assessment enables you to determine the best options for your organisation. We'll review an interactive web dashboard with you to determine your system's complexity, and identify strategic paths. In compliance with data privacy laws, the transport applied doesn't expose any confidential system data.

Explore with a sandbox first

SAP recommends running at least two Sandbox upgrade 'dress rehearsals'. Give your implementation team access to a lean (sliced) and secure (masked) copy of your Production system, so they can quickly identify issues with existing data and configurations, and evaluate innovations where they have full access to the test system.

Optimise your landscape

Manage your SAP landscape with flexibility as your business transforms. The SAP S/4HANA estate platform can be sized from Development to Production with data minimised and secured. Our Data Sync Manager Suite has a large test data management user base, and a long history in transformations and data migrations.

Be data privacy compliant in S/4HANA

Data privacy and compliance should be built into the design of your new S/4HANA landscape. Our approach embeds data scrambling and privacy factors into the project. Our sophisticated tools keep you up to date with data privacy compliance, and compliant with GDPR and other global data privacy legislation.

Modernise with cloud

Use your S/4HANA migration as an opportunity to move SAP workloads to the cloud. It provides unprecedented scalability and flexibility, and increases agility in your landscape. We'll deploy best practice templates no matter which cloud strategy you follow.

Customise your code

Reduce the code gap between Development and Production. Avoid code remediation on 20+ year-old Development systems and rebuild Development from Production in your new S/4HANA landscape. Convert your ABAP monoliths to flexible, cloud-delivered services.
