

Query Manager 3 vs. Query Manager 4: What's changed?

See how Query Manager 4 builds on the strengths of Query Manager 3 with faster performance, broader data access, and full support for modern SAP environments.

				
Feature			Query Manager 3	Query Manager 4
Visual user interaction			Modeled after relational database view	User-friendly interface
Querying calculation			Uses ABAP code	Based on spreadsheet-like formulas
New Query design			Can only start PA, OM and recruitment	Can start with a pre-defined template, SuccessFactors, SAP business objects, direct tables including custom tables, and configuration tables including your wage type configuration
Customizing Selection Screen			Select from predefined SAP format	Add/remove fields, free-form text, add a field to be used in a formula determined at runtime, set fields required/protected, etc.
Query documentation			No ability to create query documentation	Allows free form documentation and version history to restore to prior version
Email capabilities to a large group of recipients			Required to enter each email address for recipients	Can run the report wide open and auto-distribute to individuals based on the results
Multiple Period Reporting			Data selection by a single date option on the selection screen	Retrieve data as of user-defined date periods within the query
Multiple Crosstabs and Totals			Crosstab on numeric values	Multiple crosstabs and totals in one query. Crosstab on any numeric, text, or date values
Storage of previous runs			Current run only	Previous runs of the query are saved and viewable directly in Query Manager 4
Global filters			Manual process	Create global filter once to be used by all queries (i.e. categorize all OT wage types)

Maximize your ROI

Whether you're operating on-premises or in SAP® SuccessFactors®, maximize your ROI with our powerful new Query Manager Add-Ons:

SuccessFactors integration:

Generate live, unified reports across SAP On-Premises HCM, Payroll, and SAP SuccessFactors simultaneously.

Microsoft Excel:

Instantly refresh your Excel reports and dashboards with live HR and Payroll data from SAP and SuccessFactors.

Analytics Connector:

Seamlessly feed any available data from Query Manager into any analytic solution that supports your business’s needs.

Fiori:

Access your Query Manager reports from on the go; create charts and graphs for interaction, drilldown, and analysis.

Document Builder:

Effortlessly design professional documents using our intuitive, rich visual interface.

Ready to upgrade? Keep your reporting supported with Query Manager 4.
