

Transforming leading insurance company's data strategy

Data Sync Manager™ solves data challenges and boosts efficiency for global insurance company

“ We needed to find a solution as soon as possible that would allow us to handle our SAP production system's data for testing, without compromising the privacy of our data. Data Sync Manager from EPI-USE Labs was that solution.

space saving

About our client

Our client, a market leader in insurance, has a presence on five continents. It is one of the 15 largest European groups by premium volume, and the largest multinational insurance company in Latin America. With thousands of customers and employees, the group has the most extensive insurance distribution network in the market today.

The company enjoys a strong position in all lines of business: motor, home, health, total assets, corporate, global risks, reinsurance and assistance.

Success guaranteed with Data Sync Manager

Our client chose EPI-USE Labs' Data Sync Manager™ (DSM) suite to overcome their system challenges. Using System Builder™, Client Sync™ and Data Secure™, all components of the DSM suite, the solution was implemented in three phases:

- DSM for ECC and SRM
- DSM for S/4HANA
- DSM for S/4HANA FAM (Financial Asset Management)

First, System Builder was used to develop a new system, transferring the repository objects and independent data from the source system (Production). Then, using Client Sync, we exported the customisation, master data and transactions from the original system to the new one, filtered by time. In the final phase, we used Data Secure to mask data in the new environment, maintaining privacy.

This approach optimised the system implementation, and ensured the DSM solutions were used effectively.

Thanks to the implementation using Data Sync Manager, we are much more efficient. It's just what we needed: faster data copies, protected sensitive data, space savings... it has made our work easier.

SAP Solutions Manager, Leading Insurance Company

Rapid creation of secure, customised clients

EPI-USE Labs' solutions achieved the rapid creation of clients with customised and reduced data in record time. In addition, data confidentiality was ensured in non-production environments, masking sensitive data and thus complying with GDPR.

Company leaders can now upgrade their non-production environment in an agile way, with masked data, resulting in cost savings in S/4HANA and a much more efficient use of disk space. This transformation enabled uninterrupted execution of projects and processes, with no disruption to operations, and no impact on other business projects.

The collaboration with EPI-USE Labs and the implementation of Data Sync Manager has been a game changer for us. We can now maintain data confidentiality in non-production environments and continue to move forward uninterrupted with projects.
