

Harness the data you need for SAP Cloud ERP; secure the data you don't

Cloud Elevate, an SAP BTP app, streamlines the migration process to get your current SAP ECC data into the correct format for SAP Cloud ERP. Legacy data you don't need is moved to a secure read-only platform.

Fast, automated data extraction

Secure, cost-efficient storage of legacy data

Data encrypted in transit and at rest

Tailored for SAP Public Cloud

With the 2027 SAP support deadline around the corner, many organizations are choosing to move their ERP systems to a streamlined and cost-effective option with SAP Cloud ERP.

To successfully implement your new system on SAP's public cloud, you have to map your legacy data from either SAP ECC or another ERP system to the designated SAP S/4HANA migration cockpit templates. You may choose to transfer only selected data to your new system. However, you also need to consider historical data that you don't want to include in the new cloud instance.

The Cloud Elevate solution

EPI-USE Labs' Cloud Elevate enables SAP customers to manage data migration and legacy data decommissioning simultaneously.

From a legacy SAP system, Cloud Elevate provides automated transfer of historical data into an industry-leading cloud solution. You can see your data in the format you are used to, while also getting active data directly into the correct format for loading into SAP Cloud ERP.

When transferring data from alternative ERP solutions, you can import your data using CSV format, and benefit from powerful and intuitive display capabilities.

Leveraging the SAP BTP services for IdP, you can access the cloud decommissioning solution seamlessly via single sign-on. This secure solution ensures compliance with applicable data privacy legislation across all jurisdictions and regions in which you operate.

Cloud Elevate enables you to embrace SAP's latest technologies more quickly, with your legacy data still easily accessible for audits and regulatory reviews.

- Perform legacy data decommissioning to optimize your SAP Cloud ERP system
- Automate extraction of legacy SAP data into the format required for the SAP public cloud
- Match the exact columns of the SAP Migration Cockpit template xml
- Structure your legacy data view for business users for quick lookup
- Reduce the size of your new SAP Cloud ERP system
- Ensure compliance with all relevant data privacy laws

One of the big advantages of the EPI-USE Labs solution is that the conversion went really smoothly. Also, the interface is very flexible and user-friendly; it is familiar to users, as it has the same 'look and feel' as SAP.
